- **OS:** Linux
- **Web Server:** Apache
- **Datebase:** MySQL

Assumptions to develop web application
- Developing the pages that compatible to tabs and web browsers
- We will integrate the application with Amazon SES for email communication. The client has to purchase the account at Amazon SES
- The price and project time line listed in this document is based on the following assumption. Any changes in this assumption may affect the project plan / estimation. Any changes / addition to the scope will change the price / delivery schedule.
- We also assume that the necessary resources / inputs from you will be available on a timely manner to resolve project issues. Any delays in this will affect the project timeline.

Out of Scope

- Web hosting of the application is not part of the solution offering.
- Maintenance of the application is not part of the solution offering

Acceptance and Warranty Period

The client needs to accept the application within two weeks of delivery of the application. Possibillion will provide a warranty against all reasonable defects, and features that match the scope of work as identified in this proposal.

Development Cost
- **Development Cost:** Rs. 150,000.00
- **Service Tax:** 14%: Rs. 21,000.00
- **Grand Total:** Rs. 171,000.00

Deliver-ables
- **Sprint 1 Tasks:** Completion Date: July 17, 2015 EOD
    - User Interface design of Website
    - User Interface design of Nodal coordinators, Outreach coordinators
- **Sprint 2 tasks: Completion date: July 24, 2015 EOD**
    - Administrator module: Admin can create outreach coordinators, nodal coordinators
    - Nodal coordinator module
- **Sprint 3 tasks: Completion date: July 31, 2015 EOD**
    - Outreach coordinator module
- **Sprint 4 tasks: Completion date: August 07, 2015 EOD**
    - Testing and bug fixing

About Possibillion Software Technologies

A company formed with love, and driven by passion and childlike enthusiasm, Possibillion Technologies is a four – year old company based out of Hyderabad, India.

We are a team of dedicated people who don't shy from hard work, and wish to see our company grow in leaps and bounds. Google started off as Larry Page's PhD dissertation. A nudge in the right direction and the partnership with Sergey Brin ensured the company was registered from a garage in 1998. Today, Google is the most sought – after search engine, undaunted and untouched by competition.

Mark Zuckerberg started Facebook as a means for Harvard students to keep in touch. But, a continuous flow of ideas, coupled with the thirst of doing something different, made Facebook what it is today.

The road is not easy. It was never meant to be.

We have embarked on a journey on treacherous path, splattered with roadblocks and hurdles, and there is no looking back. Our services help us draw the required funding to create products of tomorrow, to make dreams come true.
